How do I back up my TimeLine presets (Mac)?

Posted by rick

For the 1.33 firmware revision we implemented a new feature which allows for MIDI preset dumps directly from TimeLine to TimeLine or from TimeLine to a MIDI host software like SNOIZE Sysex Librarian (Mac) and Bome's SendSx (PC).

Below illustrates how to back up and save presets, as well as load presets back into your TimeLine using SysEx Librarian on a Mac.

SysEx Librarian

You can download SysEx Librarian HERE.

Once you've installed the software, connect your MIDI interface to your computer and then to your TimeLine. NOTE: Make sure to double check the connections on your MIDI cable to ensure you have them connected correctly to the TimeLine.

**Step 1: Launch SysEx Librarian and choose main input source.**

Step 2: Navigate to the Global menu on your TimeLine and scroll to the *PR DMP* option.

Step 3: Record MIDI data from the TimeLine into the software.

Once recording has begun your screen will look like the following:

Step 4: Save the preset(s) as a SysEx file.

Once the preset dump has finished save the file as a SysEx file to any location on your computer.
